 KrutiDev to Chanakya
 Chanakya to Akruti
 Shivaji to ShreeLipi
 KrutiDev to ShreeLipi
..... **And anything else.....**

Convert

Unicode to Chanakya
 Unicode to Akruti
 Unicode to APS
 Unicode to DV-TT
 Unicode to Shivaji
 Unicode to KrutiDev
 Unicode to ShreeLipi
..... **And anything else.....**

Who will need FontSuvridha?

It's a Must For:

- ✓ Newspapers
- ✓ Book Publishers
- ✓ DTP Houses
- ✓ Journalists
- ✓ Individuals
- ✓ News Agencies
- ✓ NGOs
-and of course
- ✓ Government

Any person or organization working in Devnagari, using any Devnagari Editing software needs to use **FontSuvridha at some time or the other.**

With the wide variety of Devnagari Editing software available in the market today, and also the diversity of the keyboards, it is practically impossible for one to buy all these software packages. Thus users are deprived of reading and editing material composed in fonts not supported by the software available with them. Such users can now benefit from **FontSuvridha**. All they need to do is, change the font of the document to the one available with them and go on reading or even editing!

NEWSPAPERS AND JOURNALISTS

Journalists are now PC enabled. Most of them work from home or field and would like to submit stories while they are on the field.

- ✓ Journalists send the article using any software or font available with them.
- ✓ This material can be converted to the font used by the newspaper, using **FontSuvridha**, and be sent for publishing.
- ✓ Journalists can thus report in Real Time, without the need of having access to a computer where a particular font used by their newspaper is installed.
- ✓ The filing of News item or report can be done even from a cybercafé.

DTP HOUSES

- ✓ Now you don't need to have so many different packages to work in Hindi or Marathi.
- ✓ Get typed material from clients in any software, in any font, and convert it to the one you have.
- ✓ You can even type your documents in any Devnagari software & make use of any other Devnagari fonts from other vendors for decorating your document!!!!
- ✓ You can thus type your text in a simple, economical software having just one or two fonts or even using some free fonts available, and decorate it with hundreds of fonts which may be available to you.
- ✓ Remember, having pirated software is a crime, but you always have access to hundreds of fonts on web as well as other places.

NEWS & FEATURE AGENCIES

- ✓ Get typed material from many sources, without the need of a particular font or software
- ✓ Convert this material to the font used by you
- ✓ Also convert it to various fonts used by Newspapers
- ✓ Send your articles by email to newspapers in their own fonts.

BOOK PUBLISHERS

- ✓ These days many authors have started using PCs for writing.
- ✓ Get the electronic manuscript from authors, no matter what font has been used,
- ✓ Convert the text to your desired font and publish the book

GOVERNMENT OFFICES

In **Government offices**, where a number of software and fonts are used in the same department, an acute problem that of interchangeability of documents from one desk to other has posed many problems. Government offices can now benefit from **FontSuvridha**, as documents composed on any software can now be opened using **FontSuvridha**, can be edited and be sent to the originator. This will give boon to the concept of paperless e-governance in real terms.

INDIVIDUALS

Individuals can now exchange documents, no matter what font or software has been used, and read, edit or comment on the document freely. This was indeed needed by all those working in Hindi, Sanskrit and Marathi

WEB DEVELOPERS

- ✓ Get news and articles from various web sites, in different fonts, even Unicode
- ✓ Convert these to your Font
- ✓ Make Changes
- ✓ Publish to your website

About FontSuidha Project

For a multi-lingual, Multi-Cultural country like India, affordable and easy computing solutions in Indian Languages was a must. Today there are a number of software packages in Indian Languages available.

People using Indian Language Software - and particularly Devnagari Fonts - have always faced a few problems such as non-standardisation of keyboards and font encoding. The non-compatibility of text amongst different Devnagari fonts has posed an acute problem for all user sectors. Fonts for English text can be very easily changed in packages like MS Word etc, just by selecting a particular text block. However such facility was not available for Devnagari.

Every Devnagari Font Manufacturer defined his own logic for making fonts. Thus the problem began. Exchanging Devnagari Text from one font to another was highly impossible.

At this moment there are more than 100 Devnagari font formats, at least 10 of which are very popular and over 10 different keyboard layouts. A document composed with any of these fonts can not be read in MS Word or even in any other application, if the specific font is not available, leave alone editing that document. This is true with all such available fonts and formats. There always was a strong need to overcome this practical problem.

The people behind **FontSuidha** have always been in the forefront in promoting Indian Language applications on & off the Internet for many years now. A project was undertaken to overcome this limitation and allow easy transformation of documents from one font format to another. **FontSuidha** was successfully launched in 1999.

UNICODE is emerging to be a better option but with very few fonts available, and also since they are mostly useful for screen viewing, it will still take years for UNICODE fonts to become default for printing applications, DTP, Bookwork and Newspapers etc.

One of the biggest limitations of the Devnagari Software Titles available in the market today is, you can type only in the supported font. C-DAC, Modular, AkruTi, Chanakya, FontFreedom are some of the popular Devnagari Softwares available today. These are feature rich and allow you to work in multiple keyboard layouts to suit your convenience. C-DAC Software would allow you to type in DV-TT series, whereas with Modular System's software you can type in ShreeLipi range of fonts only. AkruTi would allow you to work in their fonts, whereas Free fonts like Shivaji, Kiran etc. would make your typing job difficult.

FontSuidha gives a much-awaited convenience to the Indian user, to use more than 2000 fonts even if one has a software allowing use of a few fonts. Yes! Now it is possible to type your documents in any Devnagari software & make use of any other Devnagari fonts from other vendors for decorating your document!!!! You can thus type your text in a simple, economical software having just one or two fonts or even using some free fonts available, and decorate it with hundreds of fonts that may be available to you. Remember, having pirated software is a crime, but if you have any of the fonts on your PC, you can use them in your document. And there are hundreds of free fonts on web as well as other places.

FontSuidha also allows you to download contents from various internet websites in different fonts and convert them to your font for inclusion in your articles, news and documents.

FontSuidha emerged as a single point solution that addresses the acute need of conversion of documents from one format to another. **It is now possible to just select text from Shivaji, APS, AkruTi or any other Font and change the font to DV-TT, ShreeLipi or any of those available with you in just seconds.** This is like changing your document font from Times New Roman to Arial within your MS Word document itself!!!! This means, now you can use a combination of Indian Language fonts, even if you compose your document with one software, having a limited number of fonts. It supports UNICODE conversion also.

Conversion facility is extended to HTML, TEXT, Excel, Dbf, MDB files also. The Word Document Converter comes handy with capability to convert Text in DOC Files from any Font Format to any other Font Format. Two Great utilities offered by **FontSuidha**, The **Clipboard Converter** and **Clipboard Unicode Converter** allows the user to convert clipboard text to any desired font format. This facilitates the user to manage files in packages like PageMaker, In Design, Coral Draw, Quark Express, Dreamweaver, Wordpad etc. or any other Windows based application software.

Modules in FontSuidha

MS Word Document Converter - For converting text in a DOC file.

MS Excel Converter - For converting data in Excel Spreadsheet.

Clipboard Converter - For converting any text in the Clipboard. This can be used for converting text in Pagemaker, Power Point, Smart Suite or any other application.

Clipboard Unicode Converter - For Converting any Unicode Text to Legacy and vice-versa.

FontSuvridha 6.5.5 - Professional
